Steve,
Weston provided initial assessments of the monitoring sites on Friday, with photos. We'll discuss next steps during our call later today.
-Dan

Steve,

Below is the summary of Denka Monitoring status sent to R6_RRC@epa.gov

Prior to Hurricane Ida making landfall, one SPod monitor at the Ochsner Hospital location was removed and being repaired by the SPod manufacturer. It is suspected that the SPod may have been struck by lightning. As a precaution to avoid damage to the other SPods, on Friday August 27, 2021, SPods at the Chad Baker and Fifth Ward Elementary School locations were removed and all Summa Canisters at all locations were removed. Of the three SPods that remained at their locations, one SPod PID at the Acorn and Hwy 44 location appears to be working with PID data available for remote access. The status of the SPods at the Levee and East St. John the Baptist High School are unknown. The contractors from Weston who perform the field monitoring activities have either evacuated the State or are located in Baton Rouge without power. Weston will likely not be able to perform a site visit in LaPlace until Friday September 3, 2021 or the week following, pending hurricane recovery conditions.

James,
Can you send a short summary of the Denka monitoring status to R6_RRC@epa.gov?

Thank you,
Steve
